Informazioni generali/general information

Estensione/extension: 10.000 mq

Long./long.: 13° 04' E; Latit./latit.: 43° 08' N

Altitudine/elevation: 636 m s.l.m.

L'Orto Botanico "Carmela Cortini" dell'Università di Camerino è stato istituito nel 1828 dal prof. Vincenzo Ottaviani, docente di Botanica e Chimica nella medesima università. Si estende su una superficie di circa un ettaro ai piedi delle mura del Palazzo Ducale e si affaccia a Sud-Est verso i Monti Sibillini. Circa 950 *taxa* sono distribuiti in due parti principali, una nemorale sul pendio, di impianto ottocentesco, in cui gli alberi secolari formano un boschetto, e un'altra in piano, con specie erbacee, arbustive ed arboree di varia metratura, anche a scopo ornamentale.

Nella zona pianeggiante si individuano diverse aree tematiche, ad esempio quella dedicata alla flora d'altitudine dell'Appennino centrale, la gariga, lo stagno, le specie bulbose marchigiane. Ai due lati dell'ingresso principale ci sono due serre che ospitano piante in vaso, tropicali e subtropicali, epifite e succulente, e due terrari per la coltivazione di piante carnivore e sfagno.

L'Orto Botanico, oltre che attività di ricerca, ha sviluppato negli ultimi anni, diversi progetti di divulgazione scientifica.

(<http://www.unicam.it/ortobotanico/>)

The Botanical Garden "Carmela Cortini" of Camerino University was founded in 1828 by Vincenzo Ottaviani, Professor of Botany and Chemistry in the same university.

It covers 2.40 acres at the bottom of the "Da Varano Ducal Palace", and it faces N-E direction, towards the Sibillini Mountains. 950 *taxa* are cultivated and distributed in two main areas: one is located along a slope, where century-old trees form a grove, the other one is on some flat land where herbaceous species, shrubs and trees of different sizes, also for ornamental purpose, grow.

On the flat area there are different thematic parts, for example a flower bed central Apennines typical species, with typical species of the central Apennines, a garrigue, a pond, a flower bed with bulbs typical of the Marche region. Tropical and subtropical plants, epiphytes and succulents are grown in two greenhouses on the sides of the main entrance, where two terrariums with carnivorous plants and Sphagnum are also located.

In recent last years, besides scientific research, the Botanical Garden has carried out some projects of scientific interest for schools in our region. (<http://www.unicam.it/ortobotanico/>)

Orario di apertura/opening hours: 9.00-13.00 a.m., 15.00-17.00 p.m.;

sabato/saturday: 9.00-12.00 a.m.

Giardinieri/gardeners and seed collectors: Massimo Fattinnanzi, Gianluca Pilli

Regolamento per lo scambio del materiale vivente.

In seguito alla Convenzione Internazionale sulla Biodiversità (Rio de Janeiro, 1992), l'Orto Botanico di Camerino fornisce semi e altro materiale vegetale in conformità con il Codice di Condotta per gli Orti botanici.

Dal marzo del 2010 abbiamo adottato il Codice di Condotta definito dall'IPEN (International Plant Exchange Network)

(<http://www.bgci.org/resources/pen/>).

I membri IPEN possono ottenere il materiale richiesto senza ulteriori accordi bilaterali, mentre per gli altri è necessaria la sottoscrizione dell'Accordo di Trasferimento del Materiale, da parte del rappresentante dell'Istituzione ricevente.

Insieme ai semi o alle spore viene fornito un codice di tracciabilità che indica: il paese di origine es. "IT" o "XX" se l'origine è sconosciuta – un'eventuale limitazione per la cessione, "1" se la restrizione esiste, "0" se non esiste – l'acronimo dell'Istituzione, nel nostro caso **CAME** e infine un codice di accessione interno all'Orto Botanico (es. IT-0-CAME-2010/006).

Tale codice dovrà seguire sempre la nuova accessione e i suoi discendenti, in modo da poterne rintracciare l'origine in qualsiasi momento.

Regulations on the exchange of living plant material.

In response to the Convention on Biological Diversity (CBD), the Camerino Botanical Garden supplies seeds and other plant material only in accordance with the Code of Conduct for Botanic Gardens.

In March 2010 we joined the IPEN Code of Conduct (International Plant Exchange Network)

(<http://www.bgci.org/resources/pen/>).

IPEN membership allows exchange with other IPEN-members without bilateral agreements, but non-IPEN members need to sign the Material Transfer Agreement, by an entitled representant of the receiving institution.

Seeds and spores are provided with an IPEN number that consist of: Country of origin e.g. "IT" or "XX" for unknown origin - Restriction of transfer, "1" if there exist a restriction, "0" if none – Institution acronym, in our case **CAME** and at least our accession number (e.g. IT-CAME 2010/006).

The IPEN number as a whole must always stay attached to the accession and its descendants so that the origin of the material can always be traced back.

IMPORTANTE: i non affiliati all'IPEN devono accettare le condizioni indicate nel modulo seguente, apponendo il timbro dell'Istituzione richiedente e la firma del rappresentante. Lo stampato va poi inviato insieme al modulo di richiesta dei semi/**non IPEN members have to return the agreement on the next page, stamped and signed by an entitled representative of their institution with the seed request form.**

For NON-IPEN members ONLY

Agreement on the supply of living plant material¹ for non-commercial purposes leaving the *International Plant Exchange Network*

Against the background of the provisions and decisions of the Convention on Biological Diversity of 1992 (CBD) and in particular those on access to genetic resources and benefitsharing, the Garden is dedicated to promoting the conservation, sustainable use, and research of biological diversity. The Garden therefore expects its partners in acquiring, maintaining, and transferring plant material to always act in accordance with the CBD and the Convention on the International Trade in Endangered Species (CITES).

The responsibility for legal handling of the plant material passes on to the recipient upon receipt of the material. The requested plant material will be supplied to the recipient only on the following conditions:

1. Based on this agreement, the plant material is supplied only for non-commercial use such as scientific study and educational purposes as well as environmental protection. Should the recipient at a later date intend a commercial use or a transfer for commercial use, the country of origin's prior informed consent (PIC) must be obtained in writing before the material is used or transferred. The recipient is responsible for ensuring an equitable sharing of benefits.
2. On receiving the plant material, the recipient endeavours to document the received plant material, its origin (country of origin, first receiving garden, "donor" of the plant material, year of collection) as well as the acquisition and transfer conditions in a comprehensible manner.
3. In the event that scientific publications are produced based on the supplied plant material, the recipient is obliged to indicate the origin of the material (the supplying garden and if known the country of origin) and to send these publications to the Botanical Garden of Camerino University and to the country of origin without request.
4. On request, the garden will forward relevant information on the transfer of the plant material to the body charged with implementing the CBD².
5. The recipient may transfer the received plant material to third parties only under these terms and conditions and must document the transfer in a suitable manner (e.g. by using the documentation form, such as provided in Annex 1.3).

I accept the above conditions.

Date, Signature

Recipient's name and address, stamp

¹ According to the CBD "genetic resources" means genetic material of actual or potential value. This definition covers both living and not living material. The Code of Conduct and the IPEN covers only the exchange of living plant material (living plants or parts of plants, diaspores) thus falling in the definition of genetic resources.

² In the ideal case the National Focal Point of the country of the Botanic Garden (<http://www.biodiv.org>)
